

# RISCC

risk-based  
screening for  
**cervical  
cancer**

Unbeliavable  
that there is a  
cancer which  
can be pre-  
vented!

HPV

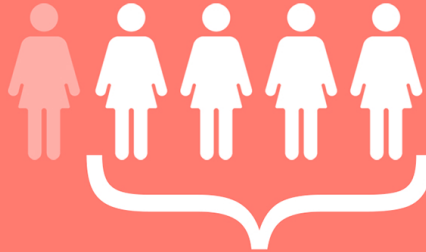

CERVICAL  
CANCER

SCREENING

Cervical cancer is caused by  
**Human Papillomavirus - HPV** -  
a very common infection.

8 out of 10 women  
will get the infection  
during their lives.

Among infected women,  
only a few women  
will develop cancer.

### ! cervical cancer risk factors !

Smoking

Oral contraceptive

Transplant, HIV infection

Autoimmune disease

primary  
prevention:  
HPV vaccine

◀ Cervical cancer can be prevented? ▶

secondary  
prevention:  
SCREENING(s)

## How can be women even more protected?

### RISC BASED SCREENING

It is not another screening type.

Researchers will analyse RISK DATA from studies, health records, published data, screening histories, vaccination status and other risk factors and provide personalised screening recommendation.

### This is RISCC Project

Electronic online platform will help in it and also a training program for health care professionals.

*This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 847845.*
